PROFESSIONAL SUMMARY

Motivated and detail-oriented Computer Science student at the University of South Carolina with a strong foundation in Java, web development, and software design. Passionate about creating efficient, user-focused software through teamwork, version control, and agile development practices. Eager to apply technical and problem-solving skills to real-world challenges in a professional setting.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, HTML, CSS, R
 - **Frameworks & Tools:** JavaFX, RStudio, Tableau, SQL, Logisim, Oracle, Git, GitHub, Agile/Scrum, Wireshark
 - **Software Development:** Object-Oriented Programming (OOP), UML Design, SDLC, Prototyping
 - **Testing & Debugging:** JUnit, Algorithm Optimization, Debugging Techniques
 - **Other Skills:** Data Visualization, Statistical Analysis, Design Thinking, Requirements Analysis, Technical Documentation, Network Analysis
-

EDUCATION

University of South Carolina — Columbia, SC
Bachelor of Science in Computer Science (Expected Graduation:2026)

Francis Marion University — Florence, SC
Completed coursework in Computer Science prior to transferring to UofSC

EXPERIENCE

Data & Analytics Intern —South Carolina Department of Juvenile Justice (SCDJJ)

[08/2026] – [12/2026]

- ***Queried and aggregated large datasets using SQL to support agency reporting and decision-making.***
 - ***Developed interactive dashboards in Tableau to visualize key performance metrics for stakeholders.***
 - ***Performed statistical analysis and generated data-driven insights using R/RStudio.***
 - ***Created publication-ready visualizations to communicate findings clearly to non-technical audiences.***
 - ***Collaborated with team members to identify trends and inform policy recommendations based on data analysis.***
-

PROJECTS

oracleMusicApp (Java, JavaFX, JSON, GitHub)

- ***Developed components for a collaborative music education app, including the DataLoader and DataWriter classes.***
 - ***Designed serialization logic to handle users, songs, and note data in JSON format.***
 - ***Debugged and resolved issues with null values and missing fields during stress testing.***
 - ***Built the JavaFX Song Menu UI for post-login navigation and song interaction.***
 - ***Utilized version control through GitHub for branching, merging, and issue tracking.***
-

Healio Project (JavaScript, HTML, CSS, GitHub)

- ***Collaborated with a team to build a web-based health platform, integrating multiple components under a shared repository.***

- Applied Git branching and cloning best practices to manage personal and group versions effectively.
 - Focused on code maintainability, debugging, and user interface improvements.
-

Two-Way Message Application with Packet Sniffing (Wireshark, Network Analysis)

- Developed a two-way messaging application and used Wireshark to capture and analyze network packets
 - Examined Ethernet frames to identify traffic patterns and understand data transmission protocols
 - Applied packet sniffing techniques to monitor and troubleshoot message delivery in real time
-

Logisim Digital Logic Projects (*Digital Circuits, Logic Design*)

- Designed and implemented a two-bit unsigned binary adder from scratch using AND, OR, and NOT gates.
 - Created a full adder without the arithmetic library, using fundamental logic gates.
 - Built a base-8 seven-segment display driver for segments *a* and *g* using 2-to-4 decoders, OR gates, and NOT gates.
 - Visualized circuits through sketches and LED matrices to demonstrate binary input/output behavior.
-

Travel Fuel Calculator (Java)

- Developed a program that computes total travel cost, required fuel, and estimated time based on user input.
 - Applied modular design principles to improve readability and reusability.
-

Income Tax Calculator (Java)

- Created an income tax estimator that applies appropriate tax brackets using conditional logic.
- Verified accuracy through test cases and algorithm checks.

Access Code Generator (Java)

- Implemented a secure algorithm to generate 30-character random access codes.
- Focused on randomness, authentication security, and algorithm efficiency.

ADDITIONAL EXPERIENCE

- **Team Collaboration:** Experienced with Scrum meetings, sprint planning, and progress tracking.
 - **Version Control:** Skilled in managing branches, resolving merge conflicts, and issue tracking on GitHub.
 - **Design & Documentation:** Created UML diagrams and technical design documents for multiple projects.
-
