I am a Computer Science student at the University of South Carolina seeking an opportunity to apply my technical knowledge and grow as a developer. My academic background and hands-on experience in software development, web technologies, and network analysis have provided me with a strong foundation for tackling real-world technical challenges.

During my internship at the South Carolina Department of Juvenile Justice (SCDJJ), I developed a practical expertise in statistics and data visualization. I used SQL to query and aggregate large datasets, Tableau to build interactive dashboards that communicated key performance metrics to stakeholders, and R/RStudio to perform statistical analysis and generate insightful visualizations that informed data-driven decisions. This experience taught me how to turn raw data into actionable narratives, a skill I am eager to bring to your team.

In addition to my data work, I have worked on several software projects, including the oracleMusicApp (Java/JavaFX), Healio web platform (HTML, CSS, JavaScript), and various digital logic designs using Logisim. I have also gained hands-on experience in network analysis using Wireshark, where I captured and analyzed Ethernet frames to understand network traffic patterns and built a Two-Way Message Application with packet sniffing capabilities. These experiences strengthened my skills in Java, JavaScript, and Git/GitHub, as well as my ability to collaborate effectively in Agile environments and produce reliable, well-documented code.

I am eager to contribute to a team that values innovation, problem-solving, and continuous learning. I welcome the opportunity to discuss how my skills and enthusiasm align with your organization's goals.

Sincerely,
James Lyles
